VERSION SHOWING THE CHANGES TO THE SPECIFICATION

IN THE SPECIFICATION:

Amend the specification as follows:

[0021] Reference numeral "2" is a protruded navel formed at the end of the inner layer 1a, so that air can be filled in or extracted from a hollow space of the hollow body K_1 via a syringe needle thrust through the navel. As shown in the figures, the navel 2 is a projection formed of the same material as inner layer 1a, e.g., synthetic rubber, and is located in the hollow interior space of the body K_1 and extends inwardly into the interior hollow space of the body K_1 somewhat centrally of one end of the body. The amount of air ~~Air amount~~ filled in the hollow space can be determined at a user's desire taking a contracting force of her vagina into consideration.
